28 October 2026

Dear Hiring Manager,

I am writing to express my interest in opportunities involving AI applications, software project support, data analysis, product operations, or software testing. With two bachelor's degrees in Software Engineering and hands-on experience in a Singapore-based engineering company, I bring a combination of technical understanding, practical software project experience, and strong documentation and coordination skills.

At Tiancheng Electrical Marine Equipment Pte. Ltd. in Singapore, I contributed to an AI Digital Management System project built with Python and PySide6. My work included GUI design and feature implementation, functional and Python script-based testing, input and output validation, troubleshooting, and collaboration with engineers. I also supported AI-assisted parameter interpretation workflows and reviewed outputs against expected application parameters. This experience helped me understand how to turn technical requirements into usable software and verify that features work reliably.

Beyond the application project, I supported equipment data analysis using SQL and InfluxDB and created Grafana dashboards for monitoring and reporting. I also worked with engineering drawing data, including DXF/JSON/CSV workflows, and prepared technical documentation. These responsibilities strengthened my ability to organise complex information, identify issues, and communicate findings clearly to technical colleagues.

Before working in Singapore, I gained experience in administrative coordination, financial and contract documentation, Excel reporting, and back-office data management. I believe this combination is particularly valuable in AI-related roles that require not only technical skills, but also careful execution, cross-functional communication, user support, and ongoing process improvement.

I am interested in contributing to a team that develops, tests, implements, or operates practical AI-enabled products and digital solutions. I am adaptable, detail-oriented, and motivated to keep learning new tools and workflows. I would welcome the opportunity to discuss how my experience could support your team's needs.

Thank you for your time and consideration. I look forward to hearing from you.

Sincerely,

GAIYUE LI (Esme)
